SUMMARY

Full-stack software engineer with 2+ years of experience building production backend systems in Go and Node.js/TypeScript, and responsive React frontends. Completed a 12-month contract on Probot, a live Discord bot, and independently built a distributed job-processing engine, a multi-tenant AI customer-service agent, and live client websites (WordPress, Shopify, Salla). Works independently and in teams. Strong in concurrency, event-driven architecture, REST and real-time APIs, and LLM integration.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript (ES6+), PHP, SQL, HTML5, CSS3

Backend: Gin, Fiber, Node.js, Express, REST APIs, WebSockets, Webhooks, JWT/OAuth, Microservices, Event-Driven Architecture, Goroutines and Channels

Frontend: React, Tailwind CSS, State Management, Responsive UI, REST and WebSocket Integration

CMS & Web: WordPress, Shopify, Salla, HubSpot, SEO, Web Analytics, Multilingual Sites, Landing Page Optimization

Data & Messaging: PostgreSQL, MongoDB, Redis (Streams, Pub/Sub, Caching, Distributed Locking)

DevOps & Monitoring: Docker, Docker Compose, Prometheus, Grafana, Git, GitHub

AI & Integrations: LLM Integration, Embeddings, Semantic Search, Prompt Engineering, WhatsApp Business API, Discord API (Discord.js, DiscordGo)

PROFESSIONAL EXPERIENCE

Full-Stack Developer, Probot (Discord Bot)

Sep 2025 – Sep 2026 | Remote (12-month contract)

- Shipped features and fixes to a live, production Discord bot by building commands, event handlers, and backend services against the Discord API and persistent data storage, with clean-code, performance-minded design.

Full-Stack Developer, Freelance

2024 – Present | Remote

- Automated customer support for client companies by building a fully custom multi-tenant WhatsApp AI agent (Node.js, WhatsApp Business API, LLM, MongoDB) that replies in real time using per-client business knowledge and managed prompt context.
- Delivered complete products end-to-end (React, Node.js/Express, concurrent Go services) including secure authentication, REST and real-time APIs, MongoDB/PostgreSQL schemas, deployment, and monitoring.
- Delivered live client websites (WordPress, Shopify, Salla) with multilingual content, lead-capture forms, and SEO, including work as part of teams.
- Shipped a Discord support-ticket bot for a client (Node.js, Discord.js, MongoDB) with dynamic channels, transcripts, and secure permissions.

PROJECTS

GoFlow: Distributed Task Queue and Worker System

github.com/merodev-coder/GoFlow

Go, Redis, PostgreSQL, Fiber, Docker, Prometheus, Grafana

- Built a background job system with a worker pool that scales automatically on live queue depth, plus exponential backoff with jitter, a dead-letter queue, and panic recovery.
- Prevented duplicate execution across instances using Redis distributed locks and idempotency keys; shipped a versioned REST API, a PostgreSQL audit log, 7 Prometheus metrics, and a 6-panel Grafana dashboard.

DiscordGuard-Core: Event-Driven Security Bot

github.com/merodev-coder/DiscordGuard-Core

TypeScript, Node.js, Redis Streams, MongoDB, Discord.js, Docker, Vitest

- Prevented gateway heartbeat drops under heavy load by ingesting events into Redis Streams in under 1 ms and processing them in consumer-group worker pools.
- Blocked raids, scams, and phishing with a Redis rate limiter, a redirect-following link resolver, and an embedding-based scanner with regex fallback; incidents logged permanently to MongoDB.

Client Websites: 4 live sites

Live in production

WordPress, Shopify, Salla, SEO, Multilingual

- luxorandaswan.com: 7-language tour site with a custom-quote form and WhatsApp lead capture. imeo-eg.net: WordPress corporate site for an engineering consultancy.
- Contributed as one member of a team to kimostore.net (bilingual EN/AR Shopify electronics store) and webmalvin.com (Arabic fashion store on Salla).

meroOS: Interactive Developer Portfolio

mero-studio.vercel.app

React, TypeScript, Tailwind CSS, Framer Motion, Three.js, Vite, Vercel

- Built a desktop-style portfolio with draggable windows, a Three.js background, and a contact terminal; deployed on Vercel.

EDUCATION

Bachelor's Degree (In Progress), Helwan International Technological University (HITU)
